## Sat-Light Series

## Model 2040 | 1:1 Redundancy Switch

## Features \& Benefits

- Local override switch
- Automatic or Manual Switching
- Remote operation possible via SNMP manager
- DC to 2.9 GHz bandwidth
- Rapid Switching to enable signal continuity
- Adjustable signal level detection
- Locking switch circuit

## Sat-Light Series

## Product Description

Model 2040 provides 1:1 redundant switching for Sat-Lightrw ${ }^{\text {TM }}$ Interfacility Link products, including the IF and LBand product lines. Model 2040 supersedes Model 2000 Switch and is backward compatible, integrating into existing systems. The Model 2040's many features enable the operator to configure the product to meet demanding system requirements.

Model 2040 can be controlled either locally or remotely. Global Foxcom's Apogee SNMP Management system set the switching state (remote/local) or transmission path (A/B). However, in the case of a fault in the SNMP manager, the user can override the SNMP manager and return to control locally via the front panel "override" switch.

The Apogee manager graphically displays the active path. By activating a pin in the unit's interface 9 -pin connector, the system operator can easily switch between Local and Remote control. Switching from the primary to redundant path can be performed by the Model 2040 manually or automatically. Note that when the unit switches to the redundant channel, it will lock and continue to transmit over that channel regardless of the input to the primary channel. The high reliability, high-frequency relay redundancy switch can be configured to detect faults in the RF signal, the optical signal, or both. In addition the user can set the threshold level at which the 2040 switch detects loss of RF signals.

Model 2040 provides two methods to detect which channel is operating:

1. Via a 3-pin Molex connector on the rear panel;
2. Through the chassis via the 9 -pin connector.

Redundant paths are configured using an RF splitter (Global Foxcom P/N 2X012), which transmits the RF signal to two Sat-Light transmitter modules. These modules are connected via single-mode fiber optic cable to two Sat-Light receivers. Each receiver module connects to the Model 2040 via a supplied coaxial jumper cable. Model 2040 then transmits the RF output signal to the end device.

## Typical Application

## Sat-Light Series

## 2040 System Specifications

| RF Specifications |  |  |  |
| :---: | :---: | :---: | :---: |
| Frequency Response | DC-950 MHz | $950-2400 \mathrm{MHz}$ | $2400-2900 \mathrm{MHz}$ |
| Flatness @ Full Band (typ.) | $\pm 0.2 \mathrm{~dB}$ | $\pm 0.4 \mathrm{~dB}$ | $\pm 0.7 \mathrm{~dB}$ |
| Insertion Loss (typ.) | -0.6 dB | -1 dB | $-1.5 \mathrm{~dB}$ |
| Input Impedance | 50 or 75 Ohm |  |  |
| Return Loss @ 50 Ohm ( 75 Ohm ) (min) | 18 dB (18dB) | 18 dB (12dB) | 12 dB (9dB) |
| Contact Resistance | 100 milli-Ohm | 100 milli-Ohm | 100 milli-Ohm |
| Channel A/B Isolation (min) | 60dB | 40 dB | 30 dB |
| Maximum RF Input | +20 dBm |  |  |
| Switching Speed (max.) | 10 mSec on / 10mSec off |  |  |
| Physical Specifications |  |  |  |
| Operating Temperature | $-20^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}$ |  |  |
| Storage Temperature | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |  |  |
| Maximum Humidity | 85 \% |  |  |
| Size | 5.1" X 4.9" X 1.6" |  |  |
| DC Power | +15 VDC @ 100mA (max) |  |  |
| Connectors |  |  |  |
| RF In/Out | F type, 50 or 75 Ohm BNC, SMA, (user specified) |  |  |
| DC Signals | 9 D-Type Male |  |  |
| Test Ports | $\emptyset 2 \mathrm{~nm}$ |  |  |
| Monitoring Connector | 3 Pin Molex (53048-0310) |  |  |

## Ordering Information

| Model Number | Description |
| :--- | :--- |
| 2040 | $1: 1$ Redundancy Switch |
| 50 | 50 Ohm BNC Connector |
| 75 | 75 Ohm BNC Connector |
| F | F-Type Connector |
| SMA | SMA Connector |
| CD | Channel Detect via 9-pin connector |
